Description

ATG1030 Pulsed Xenon Lamp is a high flash rate, short-arc xenon lamp for the ultraviolet (UV). With an output from 200-2000 nm, it is ideal for absorbance and reflection measurements. Because of the shorter duty cycle the ATG1030 is also useful for fluorescence and phosphorescence measurements.

ATG1030 operates at speeds up to 1 KHz, offers excellent pulse-to-pulse stability. It can be triggered by an external TTL pulse from fiber spectrometer (such as ATP2000P from Optosky) and offers software control of the flash rate.

The spectrometer sampling can be altered so that a variable number of flashes are observed during each integration period. ATG1030 has an SMA 905 output connector and seamlessly integrates with Optosky miniature fiber spectrometers and accessories, including optical fibers, cuvette holders, probes and other sampling optics.
