Прибор Для Измерения Коэффициента Пропускания Полного Спектра 200-1000 Нм

ATGX500 is a new full-spectrum transmittance measurement system newly designed by Optosky. A set of system with high accuracy, easy operation, Low price. Capable for transmittance of the full spectrum, has the characteristics of fast, simple and accurate. It can quickly detect the transmittance of mobile phone panels and various transparent and semi-transparent products, suitable for optical, chemical engineering and scientific research fields!

It employs excellent spectrometer to receive spectrum, and built-in homogenizing system can reshape light beam of transmitted spectrum, measured light spot adjustable, it can better match different size sample measure, the area measure can be more reliable than single point measure.

Intuitive & friendly user interface enable technician and non-technician can complete measure at a ease, the excellent hardware configuration and advanced multivariate can ensure accurate, consistent and reliable results in lab , Quality guarantee and efficient production can be integrated just in one instrument!
